

ClayFix

The convenient
way to a clay look!

 clayTec®

Clay at its best.

Clay paints by ClayTec
Now available in 146 colors

ClayFix clay paint

ClayFix clay paint makes clay finishing easy. The paint is a high-quality, healthy building material, solvent-free, and breathable.

The dry mix is simply mixed with water. ClayFix Clay Paint can be used on all paintable surfaces. Apply in a crosshatch pattern using a wide paintbrush, painter's brush, or masonry brush. ClayFix can also be spray-applied by machine.

Clay plasters and, if necessary, other substrates are pretreated with ClayTec WHITE Primer. After priming, one to two coats are generally sufficient.

The range includes 146 earthy hues. They correspond to the YOSIMA color range, although the appearance is generally lighter. Due to the printing process, the colors shown here may differ from the originals. The color appearance must be checked by applying a sufficiently large sample area.

Any questions? Find our support teams at claytec.de/en/contact/serviceteams/. Or call us at +49 (0)2153 9180.

The textures

ClayFix clay paint is available in three textures: as a smooth paint without grain and as a textured paint with either fine or coarse grain.

Without grain

Fine grain texture

Coarse grain texture

The Classic colors

The elegant ClayFix Classic colors are made from light-colored clay with proportions of colored or black clays. Alongside White, Old-White is one of the most popular colors. Kolumba-Grey was developed in collaboration with Swiss architect Peter Zumthor. The six other Classic colors are particularly light versions of the basic colors.

Wool-White

Basic colors

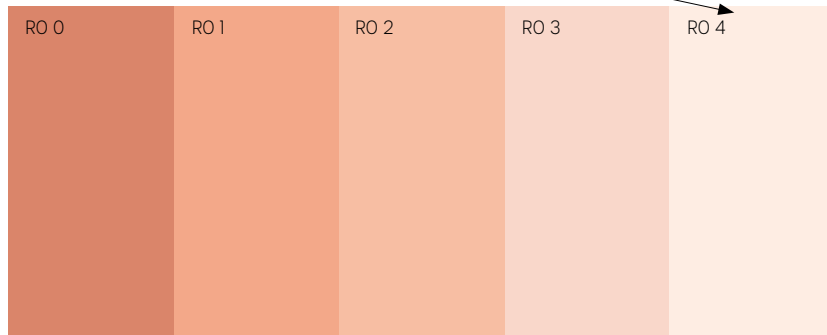

The basic colors are made from exceptionally deep-colored clays. The red color comes from iron oxides embedded in the clay, while the yellow color is produced by iron hydroxides. In green clay, the iron is particularly finely embedded in the mineral lattice. Brown clay gets its color from manganese, while black clay gets its color from carbon.

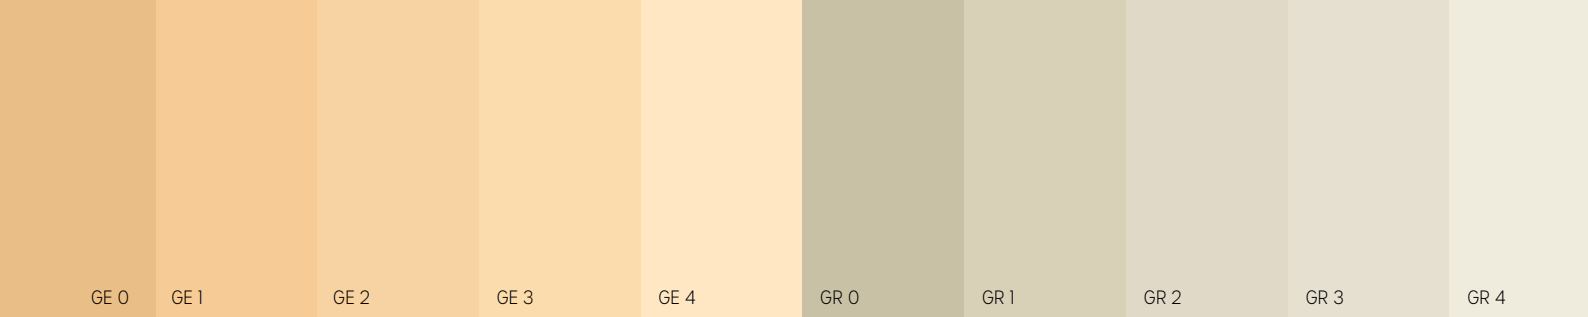

ClayFix clay paint is available in five basic colors, each blended toward white in four gradations.

Basic color system

Rot	Gelb	Grün	Braun	Schwarz
RO 0	GE 0	GR 0	BR 0	SC 0
RO 1	GE 1	GR 1	BR 1	SC 1
RO 2	GE 2	GR 2	BR 2	SC 2
RO 3	GE 3	GR 3	BR 3	SC 3
RO 4	GE 4	GR 4	BR 4	SC 4

The color palettes

Seven particularly beautiful color palettes were selected from the innumerable ways to blend the basic colors. Two basic colors were mixed with each other in four stages for each of these series. The resulting colors were then blended towards White in three stages.

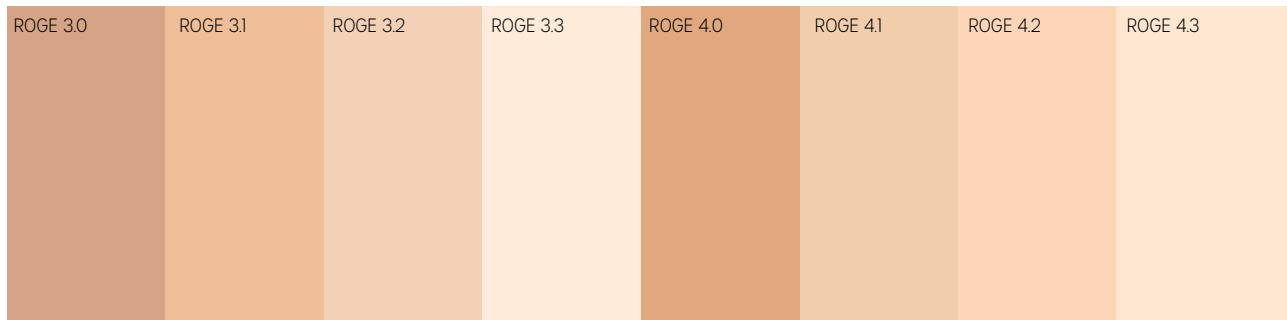

The color palettes are structured identically to the YOSIMA color palettes. This is why the colors harmonise perfectly.
